

DSAG Annual Conference

The Secret Star: Data

And Action! - that is the motto of DSAG Annual Conference 2019. The topic of the movie is obvious: the shortest and best way to SAP S/4 Hana. But the question is, who will be the star of the show? The presentations

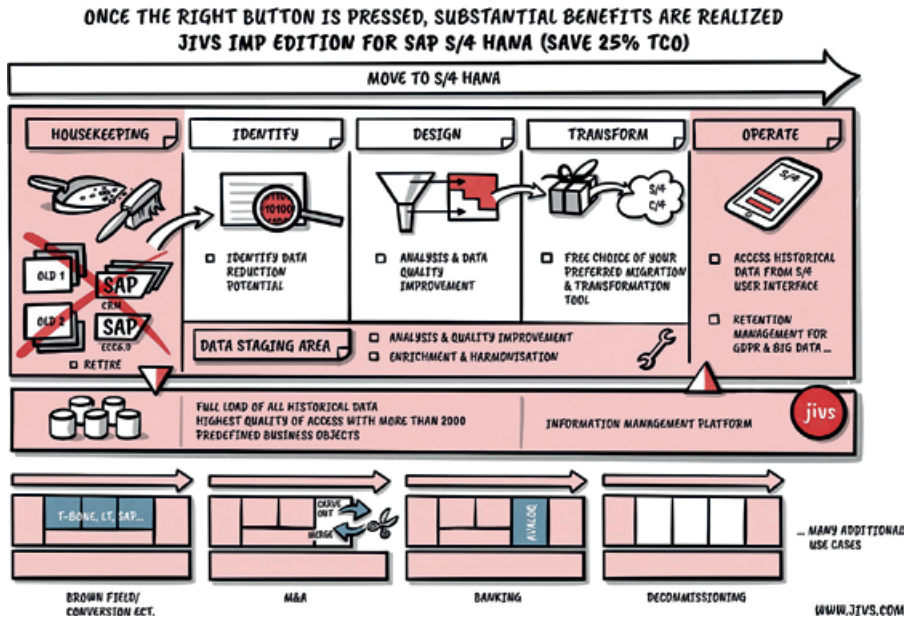

and keynotes at Sapphire Now 2019 in Orlando, Florida, already gave a pretty strong hint. Even though the SAP Cloud Platform was the main focus, there was a secret star that mostly went unnoticed: the data. They

are foundation as well as fuel for a modern application landscape based on SAP's new software generation.

For data to be able to steal the show, however, companies need a kind of data deposit for company information before the migration to SAP S/4 Hana can take place. System-independent information management platform JiVS IMP is able to provide this kind of staging area.

JiVS IMP enables customers to assess the potential of company information before the migration, evaluate, analyze and optimize data quality through combination with other information or harmonization, and define selection criteria and filters for the migration. Consequently, customers are able to transform and migrate information in a neutral format through comprehensive SAP tools or third-party solutions.

With JiVS IMP, not only the stars of the show, but everyone on set is perfectly prepared for the migration to S/4 Hana. And Action!
