

ENERGY TRANSFER FINDS A SUSTAINABLE DATA GOVERNANCE SOLUTION TO SUPPORT ITS FUTURE GROWTH

USE CASE:
Application Retirement
Retention Management & GDPR

INDUSTRY:
Energy

COUNTRY:
US

Energy Transfer Partners (now officially Energy Transfer LP) is a U.S. Fortune 500 natural gas and propane pipeline transport company, headquartered in Dallas, Texas. It was founded in 1995 by Ray Davis and Kelcy Warren, who remain Chairman and CEO. It is the parent company of Dakota Access, LLC, the company responsible for developing the controversial Dakota Access Pipeline.

“JiVS IMP paved the way for IT modernization, rationalizing applications and archiving data. Alongside significant cost savings from decommissioning systems, JiVS IMP greatly eases compliance. The client now has a data governance solution that’s ready to support future growth.”

Jean-Marc Pestoni
Data Migration International

SITUATION

- Home-grown, heterogeneous IT landscape with multiple legacy systems such as Mainframe, SAP, SAP ADK, Maximo, Infor, JDE, and others
- Legacy systems have been costly to maintain - limited flexibility to absorb future growth and acquisitions
- Legacy data (up to 50 years old) is stored on very old hardware and tape devices
- With the introduction of a central SAP S/4HANA system, only relevant data needs to be migrated from legacy systems, while obsolete data should be historicized and kept auditable

SOLUTION

- Extraction of SAP ADK data and use of retention management for deletion of personal data in line with CCPA/GDPR
- Implementation of governance framework incl. policies and processes to manage historical data effectively
- Archived data provides users with easy-to-use screens, smart document archiving, and standard data security protocol across various business processes
- Unique technical infrastructure and user interface to all historical data

BENEFITS

Improved compliance with data governance, retention rules, and clearly defined data stewardship

Eliminated old legacy systems including mainframe infrastructure, tape devices, and ADK data

Significant savings in operating costs as a result of the legacy system shutdown

Easy access via JiVS IMP UI; the data is readily available and can be evaluated
