MEIER-TOBLER DECOMMISSIONS HR SYSTEM IN ONLY FOUR WEEKS

Meier Tobler Group AG, formerly Walter Meier AG, is a Switzerland-based company specializing in the climate and manufacturing technology sector. It diversifies its operations into four business divisions: Humidification; Climate; Tools; Machining Solutions.

“To decommission a legacy system in only four weeks is indeed an impressive accomplishment. We are very satisfied with JiVS and Data Migration Services. Now, we can stop worrying about legacy systems and focus on future strategic tasks. I can only recommend all companies to follow our example and get rid of their legacy systems before they start the migration.”

Barbara Lang
Head of CIO Office,
Meier Tobler AG

SITUATION

- Legacy data and documents are subject to numerous laws and regulations which require companies to store them for many years to come – without changing them in any way
- Legacy data and documents require stability & immutability
- They had four weeks to historize all legacy data

SOLUTION

- Decommissioning the superfluous HR system
- JiVS complies with laws and regulations concerning legal retention periods of legacy data and documents

BENEFITS

HR system decommissioning in only 4 weeks

JiVS was able to comply with all technological requirements

Operating the legacy system for another full year would have cost a lot more than implementing JiVS
