

USE CASE

Application Retirement & Carve-Out Transformation

INDUSTRY

Logistics & Parcel Delivery

REGION

Canada

Retiring SAP ECC & OpenText While Preserving Secure Access to Critical Logistics Data

Purolator is one of Canada's leading logistics and parcel delivery providers, operating complex enterprise systems supporting nationwide shipment, operational, finance, and workforce processes. As part of its modernization strategy, the organization sought to retire legacy SAP ECC and OpenText environments while preserving secure, compliant access to critical historical business data.

Situation

- **Purolator** operated aging SAP ECC and OpenText environments containing decades of shipment, operational, finance, HR, and customer service records.
- Maintaining these systems created increasing infrastructure cost, operational complexity, and long-term compliance challenges. At the same time, the organization needed to preserve secure access to both structured SAP records and unstructured
- OpenText documents while supporting selective business carve-outs and future SAP modernization initiatives.
- The environments also contained highly confidential HR and workforce data requiring strict long-term protection and controlled access.
- Together, the SAP ECC and OpenText systems represented approximately **20TB of historical**

Solution

- **Purolator deployed JiVS IMP as a unified SaaS-based platform supporting:**
 - SAP ECC retirement
 - OpenText decommissioning
 - Selective SAP data carve-outs
 - Secure HR data archival
 - Long-term compliant retention
 - Unified access to structured and unstructured enterprise records
- JiVS IMP consolidated historical SAP and OpenText data into a single governed enterprise layer while preserving seamless access for business users, auditors, and operational teams.
- A key differentiator for **Purolator** was JiVS IMP's ability to support multiple transformation use cases within one integrated platform rather than separate archival and carve-out solutions.

Benefits

20TB

SAP ECC + OpenText Data Retired

80%

Reduction in Legacy IT Operating Costs

100%

Audit-Proof & Compliant Historical Data Access

Secure HR Data Retention

Protected highly confidential employee and workforce records with long-term integrity and controlled access

1 Platform, Reduced Complexity

Unified SAP + Non-SAP Historical Data Layer into a simplified enterprise systems landscape

AI-Ready Enterprise Data

Governed historical data foundation for SAP Joule, SAP BDC, copilots, analytics, and AI-driven logistics operations

Clean-Core SAP Strategy

Modernized toward SAP S/4HANA with JiVS IMP as a strategic SAP architecture layer — preserving decades of business context without carrying legacy complexity forward
